## **PSI Introduces NEW SecurEdge Plus® Blocking Pads For Slick Lens Coatings**

New **SecurEdge Plus®** is the latest generation of blocking pads designed specifically to bond to AR, hydrophobic and oliophobic lens coatings. Based on the proven design of the highly successful SecurEdge® technology, SecurEdge Plus® incorporates a dual, high performance adhesive system. On one side of the pad is an adhesive engineered to adhere to slick lens coatings without slipping, while the other side has a different adhesive designed to adhere securely to the block. The pad offers a soft foam surface that conforms to any curve while protecting the lens. The pads have a double-tabbed design for easy removal. PSI offers SecurEdge Plus® in nine configurations to fit most edger blocks.

Please contact PSI for samples and more information at VEE Booth #3009 or by calling 800-237-8154.
