911 Central Slurry System

Central slurry systems are designed to extend polish life with a cone-shaped tank that creates a constant swirling motion, which assures continuous suspension of polish solids to eliminate waste caused by settling. The 911 is a compact system which utilizes a bypass valve to reduce splashing and allow the polish to be circulated before going to the cylinder machine. It comes equipped with a cooling coil that, when hooked to an external chiller (sold separately), will maintain the polish at the industry recommended temperature for improved lens surface quality.

The 911 central slurry system is housed in durable stainless steel to reduce corrosion and provide easy maintenance. No seals or bearings come in contact with the slurry. The system comes with a fine mesh, nylon screen to capture large particles and a 200 or 300 micron filtration system to take care of smaller impurities. All pumps are corrosion resistant CPVC construction.

Features & Benefits

- 5 gallon, insulated tank serves up to 8 spindles.
- Includes top load filtration system to remove contaminants from polishing compound to extend polish life.
- Polish consumption is reduced by half from traditional bowl systems.
- Baumé and temperature control is easy with a one tank system.
- Individual pumps are no longer needed.
- The addition of PSI's 710 or 955 chiller is recommended for optimum efficiency.

Specifications:

System:	911
Tank:	5 gallon, insulated tank
Housing:	stainless steel
Hardware:	stainless steel & brass
Serves:	up to 8 spindles
Dimensions:	28"H x 18"W x 18"D
Filter:	200 micron & screen
Pump:	1/2hp, CPVC
Electrical:	115V, 5 Amp
Shipping Wgt:	91 lbs.

Replacement Filter Bags Part #s:
913-28A-200 (200 micron)
913-28A-300 (300 micron)

System includes: finished hoop screen assembly, heat exchange coil, 8' vinyl hose, 4 hose clamps, top-load filter system.
