

ASTA

Automatic Surface Taper Applicator

Efficiency at its best!

Don't Just Take Our Word For It!

“You should have come out with an automatic taper twenty years ago. Its one of the few things in the lab that's been a no brainer. It increased our production tremendously. If we have a spike in production, it is much easier to keep up the pace with the ASTA.”

*Joe Seibert
Three Rivers Optical Co.*

“The ASTA is easy to cost justify. We had 3 people with manual tapers. After we purchased the ASTA, we were able to reduce the staff by one. With one less person's wages and benefits, the ASTA will pay for itself in a year. The main features of the taper are the short learning curve, the ability to use the cycle downtime for operators to bag the tray, low maintenance and easy installation. Installation took only about 10 minutes with no outside people, we used house air and the standard 110 outlet. The potential for repetitive motion injuries is greatly reduced. The ASTA is one of the first no brainers I've seen during my 30 years in the optical business.”

*Derek Moore
VSP*

The ASTA is performing excellent. You can really pump jobs out on the taper. It is really good. The operators love that you can load two lenses at a time or do just one. It really saves time and is easier on the operators.”
