

Plastic Polish Pads

Pink Perfection (549 Series)

- Highly absorbent material keeps polish on the lens for enhanced stock removal. When used with PSI fining pads, shorter cycle times may be achieved. *
- Produces less haze and excellent lens clarity, ideal for backside and AR coatings.
- High density and 25% thicker carrier make it twice as durable as other polish pads. Long lasting without excessive fiber buildup in slurry.
- Varied fiber lengths and densities hold the polish on the pad for superior surface quality.
- Pink color makes it easy to see the polish saturation on the pad and low slurry contamination.

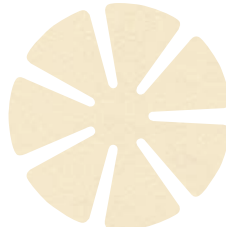

Maize HD (649 Series)

- 5-minute* cycle time on all materials to maximize throughput and surface quality.
- New manufacturing technologies produce the highly durable, yet thinner pad that provides crystal clear lenses.
- Environmentally friendly, Maize HD is manufactured with natural rubber, less dyes and low density fibers that keep slurries cleaner and reduce polish carry out.
- Precision rayon fibers resist sheering keeping slurries cleaner, extending polish life.
- Durable low-density/high strength textiles offer a balanced foundation of strength and firmness as well as providing easy application and removal from the lap.

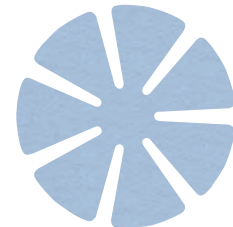

Yellow Ultimate (349 Series)

- Designed for high index, polycarbonate and CR-39 materials.
- Allows for aggressive stock removal with abrasive resistant rayon fibers for longer polishing cycles.

Cream Ultra (449 Series)

- Has a unique textile base that provides excellent strength and conforming properties.
- Engineered to maximize fiber retention during extended polishing cycles.

Blue Supreme (347 Series)

- Excellent for resin materials.
- Designed with a precise thickness to ensure uniform stock removal and a high lens surface quality.

* Results may vary from lab to lab due to operating conditions. Recommended pad cycle times may need to be adjusted to achieve required surface quality and polish longevity may vary from lab to lab.
